Kid Code Amazing Apps

This innovative class uses a kid-friendly simplified version of Javascript to teach kids real coding skills. Kids can work at their level to create working apps with as few as 2 lines of code, to more complicated apps with 60+ lines of code to the ultimate challenge of creating your own app! Students can download their apps onto their personal devices to share at home. Kid Coders work through app booklets based on different themes each session and take them home on the last day. By logging in at home students can expand on what they've learned in class!
